Water is precious. We request you not to waste even a single drop of water. As a measure to conserve water, we have an STP plant in our college, which recycles the waste water generated in the campus. The recycled water is used for gardening and washing the vehicles.

Water is precious. Bangalore is facing water shortage and we need to save every drop of it. Use water as required only. Close taps immediately after usage. If you happen to see water leakage anywhere, immediately report to your class teacher. If you see taps open with leaking water in laboratories and washrooms, you have a civic responsibility to close it so that there is no wastage of water

World Water Day

As we approach World Water Day on March 22, it is imperative that we recognize the significance of freshwater conservation and sustainable management of water resources. Designated by the United Nations, this annual observance serves as a reminder of our collective responsibility to safeguard this precious resource.

In alignment with the global initiative, the Centre for Environment and Sustainability at Kristu Jayanti College, Autonomous, is organizing a unique awareness campaign utilizing the art of mime. Through this expressive form of communication, we aim to convey the importance of water conservation and provoke meaningful reflections on our water usage habits. We believe that by coming together, we can make a meaningful impact on the preservation of our water resources for future generations.

We cordially invite all faculty, staff, and students from all UG & PG programmes to join us for this event. Details are as follows:

Date: 26th March 2024

Time: 11:50 a.m.

Location: Chavara Square

This event will provide an opportunity for us to learn more about the importance of saving water and explore practical ways in which we can contribute to this cause. Your presence and participation are invaluable in spreading awareness and fostering a culture of environmental stewardship within our campus.

Water Conservation Alert

As we are entering into summer, it is crucial that we address a pressing issue that affects not only our campus, our residence and hostels but also the larger city we reside in.

Our city is currently facing a severe water shortage. The groundwater levels have receded significantly, leaving us in a precarious situation. With the onset of summer, the demand for water is rising.

As members of the academic community, we need to be responsible stewards of our resources, especially in times of crisis. Therefore, I urge each and every one of you to prioritize water conservation in all aspects of your daily lives.

Simple impactful steps we can take to conserve water:

Be mindful of water usage in the washrooms and cafeteria of our campus and at the places you reside - home and hostels.

Report any instances of water wastage; Fix any leaks or drips in faucets and pipes promptly.

Encourage friends and neighbours to adopt water-saving habits.

Reuse water whenever possible, such as collecting rainwater for gardening or using leftover water from cooking for plants.

Water plants during the cooler parts of the day to minimize evaporation.

By collectively embracing these practices, we can make a tangible difference in conserving water and alleviating the strain on the water resources of our locality.

Let us demonstrate our commitment to sustainability and responsible citizenship through our actions.

Water Management Campaign

Jayantian Extension Services and Center for Social Activities Organising Water Management Campaign

As members of this vibrant college community, we have a shared responsibility to care for our environment and conserve precious resources. Water, in particular, is a vital yet finite resource that requires careful management. With this in mind, it's crucial that we come together to implement sustainable water practices within our campus. By making small changes in our daily routines, we can make a significant impact on water conservation efforts.

Changing our behaviours and habits is key to achieving meaningful water conservation. Encourage everyone to adopt simple yet effective practices, such as turning off faucets when not in use, taking shorter showers, and reporting any leaks or wastage promptly. Promote the use of reusable water bottles and discourage single-use plastics, which contribute to water pollution. Emphasize the importance of using water responsibly in recreational activities such as sports events and campus festivities.

Our college campus is not only a place of learning but also a green oasis amid urban surroundings. Let's ensure that our landscaping practices align with sustainable water management principles. Choose native plants that require less water and maintenance, and implement efficient irrigation techniques such as drip irrigation and mulching. Encourage the use of organic fertilizers and natural pest control methods to minimize water pollution from runoff.

As Jayantians, we have the power to drive positive change and set an example for future generations. By embracing a culture of water stewardship within our college campus, we not only reduce our environmental footprint but also inspire others to do the same. Let's commit ourselves to promoting responsible water management practices and creating a sustainable future for our campus and beyond

Together, we can make a difference.
